Table of Contents

Preface ix

I Background 1

1 Why do we learn statistics? 3
- 1.1 On the psychology of statistics . . . 3
- 1.2 The cautionary tale of Simpson's paradox . . . 6
- 1.3 Statistics in psychology . . . 9
- 1.4 Statistics in everyday life . . . 11
- 1.5 There's more to research methods than statistics . . . 11

2 A brief introduction to research design 13
- 2.1 Introduction to psychological measurement . . . 13
- 2.2 Scales of measurement . . . 17
- 2.3 Assessing the reliability of a measurement . . . 22
- 2.4 The "role" of variables: predictors and outcomes . . . 24
- 2.5 Experimental and non-experimental research . . . 25
- 2.6 Assessing the validity of a study . . . 27
- 2.7 Confounds, artefacts and other threats to validity . . . 30
- 2.8 Summary . . . 40

II Describing and displaying data with JASP 43

3 Getting started with JASP 45
- 3.1 Installing JASP . . . 46
- 3.2 Analyses . . . 47
- 3.3 Loading data in JASP . . . 48
- 3.4 The spreadsheet . . . 50
- 3.5 Changing data from one measurement scale to another . . . 52
- 3.6 Quitting JASP . . . 52
- 3.7 Summary . . . 53

4 Descriptive statistics 55
- 4.1 Measures of central tendency . . . 55
- 4.2 Measures of variability . . . 66
- 4.3 Skew and kurtosis . . . 73
- 4.4 Descriptive statistics separately for each group . . . 76

4.5 Standard scores . . . 76
4.6 Summary . . . 78

5 Drawing graphs **83**
5.1 Histograms . . . 84
5.2 Boxplots . . . 86
5.3 Saving image files using JASP . . . 89
5.4 Summary . . . 90

III Statistical theory **91**

6 Introduction to probability **99**
6.1 How are probability and statistics different? . . . 100
6.2 What does probability mean? . . . 101
6.3 Basic probability theory . . . 106
6.4 The binomial distribution . . . 109
6.5 The normal distribution . . . 113
6.6 Other useful distributions . . . 118
6.7 Summary . . . 122

7 Estimating unknown quantities from a sample **123**
7.1 Samples, populations and sampling . . . 123
7.2 The law of large numbers . . . 131
7.3 Sampling distributions and the central limit theorem . . . 133
7.4 Estimating population parameters . . . 139
7.5 Estimating a confidence interval . . . 147
7.6 Summary . . . 152

8 Hypothesis testing **153**
8.1 A menagerie of hypotheses . . . 154
8.2 Two types of errors . . . 157
8.3 Test statistics and sampling distributions . . . 159
8.4 Making decisions . . . 161
8.5 The *p* value of a test . . . 164
8.6 Reporting the results of a hypothesis test . . . 167
8.7 Running the hypothesis test in practice . . . 169
8.8 Effect size, sample size and power . . . 170
8.9 Some issues to consider . . . 177
8.10 Summary . . . 179

IV Statistical tools **181**

9 Categorical data analysis **183**
9.1 The χ^2 (chi-square) goodness-of-fit test . . . 183
9.2 The χ^2 test of independence (or association) . . . 198
9.3 The continuity correction . . . 203
9.4 Effect size . . . 203
9.5 Assumptions of the test(s) . . . 204
9.6 Summary . . . 205

10 Comparing two means **207**
10.1 The one-sample *z*-test . . . 208
10.2 The one-sample *t*-test . . . 214
10.3 The independent samples *t*-test (Student test) . . . 219
10.4 The independent samples *t*-test (Welch test) . . . 229
10.5 The paired-samples *t*-test . . . 232
10.6 One sided tests . . . 237
10.7 Effect size . . . 238
10.8 Checking the normality of a sample . . . 241
10.9 Testing non-normal data with Wilcoxon tests . . . 246
10.10 Summary . . . 248

11 Correlation and linear regression **251**
11.1 Correlations . . . 251
11.2 Scatterplots . . . 261
11.3 What is a linear regression model? . . . 262
11.4 Estimating a linear regression model . . . 265
11.5 Multiple linear regression . . . 267
11.6 Quantifying the fit of the regression model . . . 270
11.7 Hypothesis tests for regression models . . . 273
11.8 Regarding regression coefficients . . . 277
11.9 Assumptions of regression . . . 279
11.10 Model checking . . . 280
11.11 Model selection . . . 288
11.12 Summary . . . 290

12 Comparing several means (one-way ANOVA) **293**
12.1 An illustrative data set . . . 293
12.2 How ANOVA works . . . 295
12.3 Running an ANOVA in JASP . . . 305
12.4 Effect size . . . 306
12.5 Multiple comparisons and post hoc tests . . . 307
12.6 Assumptions of one-way ANOVA . . . 311

12.7 Removing the normality assumption . . . 315
12.8 Repeated measures one-way ANOVA . . . 319
12.9 The Friedman non-parametric repeated measures ANOVA test . . . 324
12.10 On the relationship between ANOVA and the Student *t*-test . . . 325
12.11 Summary . . . 325

13 Factorial ANOVA **327**
13.1 Factorial ANOVA 1: balanced designs, no interactions . . . 327
13.2 Factorial ANOVA 2: balanced designs, interactions allowed . . . 339
13.3 Effect size . . . 346
13.4 Assumption checking . . . 349
13.5 Analysis of Covariance (ANCOVA) . . . 351
13.6 ANOVA as a linear model . . . 353
13.7 Different ways to specify contrasts . . . 361
13.8 Post hoc tests . . . 365
13.9 The method of planned comparisons . . . 368
13.10 Factorial ANOVA 3: unbalanced designs . . . 369
13.11 Summary . . . 380

V Endings, alternatives and prospects **381**

14 Bayesian statistics **383**
14.1 Probabilistic reasoning by rational agents . . . 384
14.2 Bayesian hypothesis tests . . . 389
14.3 Why be a Bayesian? . . . 391
14.4 Bayesian *t*-tests . . . 399
14.5 Summary . . . 401

15 Epilogue **403**
15.1 The undiscovered statistics . . . 403
15.2 Learning the basics, and learning them in JASP . . . 411

16 References **415**
